

OMAR MASMOUDI

Full Stack Software Engineer

Ariana, Tunisia • +216 53 516 045 • omar.masmoudi.pro@gmail.com • linkedin.com/in/omaar-masmoudi • github.com/MasmoudiOmar

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 5+ years of experience architecting and shipping scalable web applications across the Education and Blockchain domains. Proficient in Next.js, Angular, React, Spring Boot, Node.js, and AI/ML integrations. Co-founder of two AI-powered products, comfortable owning systems end-to-end—from architecture and data pipelines to deployment and team leadership.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, SQL

Frontend: Next.js, React, Angular, Tailwind CSS, shadcn/ui, daisyUI, Angular Material, PrimeNG, RxJS, TanStack Query

Backend: Node.js, Spring Boot, REST APIs, tRPC, WebSockets, OAuth2/JWT, Spring Data JPA, MVC

Databases: PostgreSQL, MySQL, MongoDB, Redis

AI & Integrations: OpenRouter, LLM APIs, AI/ML pipeline design, Stripe, OAuth2

DevOps & Tools: Docker, Kubernetes, AWS, Terraform, Vercel, GitHub Actions, Git, Maven

PROFESSIONAL EXPERIENCE

Software Engineer — AI Trajectory Annotation & Evaluation | [Mercor](#)

Remote Jan 2026 – Present

- Evaluated and annotated approximately 250 multi-step AI agent coding trajectories across TypeScript, JavaScript, Rust, Go, and C++ codebases, applying software engineering judgment to assess code correctness, reasoning quality, and adherence to established rubrics as part of a collaborative team with lead and reviewer feedback.
- Authored rubrics, expected-output criteria, and test cases for a ~100-case benchmark suite run across multiple models to identify differential failure modes and performance gaps, translating task requirements into structured, repeatable scoring criteria.

Full Stack Software Engineer & Co-Founder | [Solvizor](#) (app.solvizor.com)

Hybrid Jan 2025 – Dec 2025

- Architected an AI-powered chat interface with a model-orchestration layer on OpenRouter for automatic fallback, integrating 20+ wallet-analysis tools and enabling natural-language queries across portfolio analysis, PnL tracking, and token discovery for 5k+ active users.
- Engineered an asynchronous job-processing system using Redis queues and Node.js workers, cutting signature-fetching and transaction-parsing time by 95% versus the initial implementation and standard API call times, through fully async batch processing of blockchain historical data.
- Designed a data pipeline that transforms raw on-chain transactions into structured records, computing profit/loss across 50M+ token swaps while maintaining complete, auditable transaction history.
- Owned frontend architecture end-to-end — shipped responsive chat and landing-page experiences with shadcn/ui and Tailwind CSS, improving page load time and conversion rate.

Full Stack Software Engineer & Co-Founder | [Learna](#) (reading-assistant-web.vercel.app)

Tunisia May 2024 – Dec 2024

- Directed frontend development of the Learn, Explore, and Quiz Creator modules using Tailwind CSS, daisyUI, and TanStack Query, reducing data-fetch latency by 90% through optimized caching strategies.
- Co-built an AI-powered learning SaaS platform that auto-generates summaries and quizzes from PDFs, articles, and YouTube content, onboarding 100 users within 1 month of launch.
- Launched social quiz-sharing and graded/ungraded learning modes, increasing learner engagement by 30%.

Software Engineer | [AMI](#)

Tunisia Aug 2021 – Mar 2024

- Built interactive, responsive UI components with Angular Material, PrimeNG, and custom CSS animations for an enterprise learning platform serving 4k+ users.

- Delivered backend REST APIs with Spring Boot and MVC architecture, powering competency-based learning workflows across 20 modules.
- Designed adaptive learning algorithms that generate personalized, competency-based learning paths, improving completion rate by 25%.
- Optimized advanced search using Spring Specification patterns for flexible, dynamic query filtering, reducing average query time by 40% across 1M+ records.
- Provisioned and managed cloud infrastructure using Terraform alongside the infrastructure team, supporting deployment environments for the enterprise learning platform in parallel with primary frontend and backend development responsibilities.

Software Engineering Intern | [AMI](#)

Tunisia Feb 2021 – Jul 2021

- Developed Angular components for authentication and navigation using reactive forms and RxJS for state management.
- Authored UML diagrams (Use Case, Entity-Relationship, Sequence) translating client requirements into system design specifications.
- Configured the Spring Boot backend with Maven and MySQL, building REST endpoint controllers and repositories via Spring Data JPA.

EDUCATION

Engineering Degree, Software Engineering | [ESPRIT](#)

Tunis, Tunisia Sep 2019 – Jan 2021

Preparatory Studies, Computer Science Fundamentals | [IPSAS](#)

Sfax, Tunisia Sep 2018 – Jun 2019

Prior studies: Civil Engineering, ENIS — Sfax, Tunisia (2013–2016) • Preparatory Classes, Mathematics & Physics, IPEIS — Sfax, Tunisia (2011–2013)
